Calibration

Site calibration is the process of on-site testing and adjustment of weighing instruments to ensure accuracy and compliance with relevant standards and regulations, typically performed by accredited calibration service providers using certified test weights. Moreover, in Malaysia, describing weighing scale stamping means explaining the mandatory legal process where an authorized body verifies a scale's accuracy for trade, involving calibration checks and affixing a compliant stamp or seal, ensuring fairness, and requiring annual re-verification under the Weights & Measures Act 1972.
